

Two handed pot holder

Gather and cut supplies.

One piece 24"x8" terry cloth. You could use an old bath or dish towel for this if you want.

2 – 5" x 8" terry cloth

2 – 5" x 8" batting or Insulbrite

2 – 5" x 8 fabric

½ inch bias tape (or make your own)

First quilt together the layers of your two outside pockets, terry on the bottom, then batting, then fabric.

Place your pocket pieces back on the long piece so you can figure out which edge you want facing in, which are the edges that need bias tape. This might not matter to your design, but for instance if you want to have a fork on the left and a knife on the right, you don't want to mess this up. Cut strips of bias tape about 8" long for these inner edges.

Now you have bias tape on the inside edges of the pockets. Pin the corners back onto the long piece. The time has come to attach more bias tape all the way around the whole thing.

You can do the corners however you like, but I like them rounded. I've found that it's easier for me to leave them uncut like this, then pin the first side of the tape down in a curve.

Then I sew and then cut the corners after, so that all the layers are even with the edge of the tape. Stitch down the other side of the tape and you are done.

You can attach a loop in the very center on the top side if you want.
